**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

## Chapter 1. Overview

---

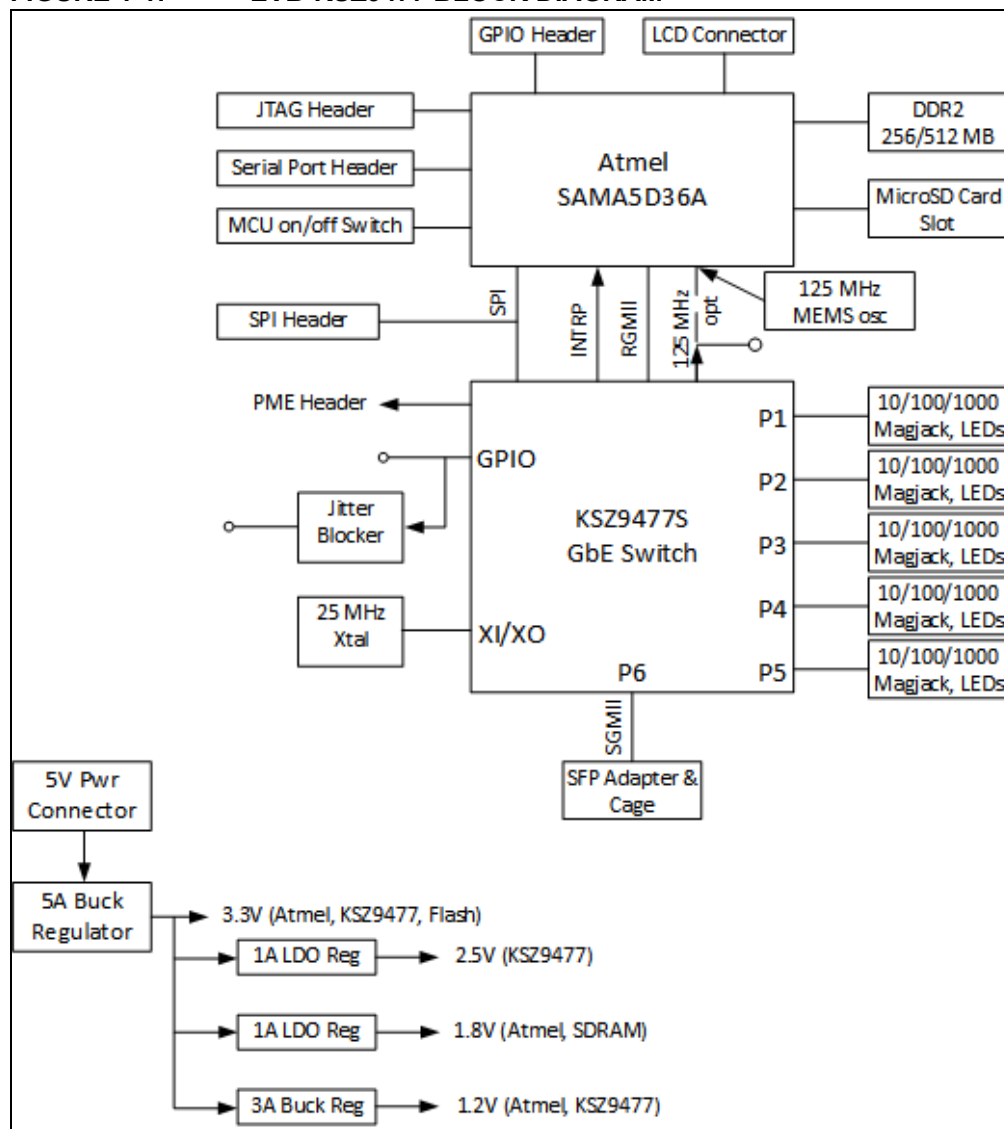

### 1.1 INTRODUCTION

The EVB-KSZ9477 evaluation board features the KSZ9477 seven-port managed gigabit Ethernet switch. It has five 10BASE-T<sub>e</sub>/100BASE-TX/1000BASE-T physical layer transceivers (PHYs) and associated MAC units, one SGMII and one RGMII interfaces. Ports 1 through 5, with integrated MAC and PHY are connected to RJ45 Ethernet jacks with integrated magnetics. The SGMII interface is connected to a small form-factor pluggable (SFP) transceiver receptacle whereas, the RGMII interface is connected to the SAMA5D36A embedded microprocessor (MPU).

A user can use the on-board MPU for the customized applications such as IEEE 1588, audio-video bridging (AVB) and ring redundancy (DLR & HSR). The board also provides 2Gb (265MB) DDR2 SDRAM and 2Gb (256MB) of NAND flash memory.

The scope of this document is to describe the EVB-KSZ9477 evaluation board setup and corresponding jumper configurations. A simplified block diagram of the board is shown in [Figure 1-1](#).

## Chapter 2. Board Details & Configuration

---

This section includes sub-sections on the following EVB-KSZ9477 details:

- [Power](#)
- [Resets](#)
- [Clocks](#)
- [Configuration](#)
- [Mechanicals](#)

### 2.1 POWER

#### 2.1.1 +5V Power

A 5V/2A power supply should be connected to J8 on the board. The SW4 switch must be in the ON position to power the board. The F1 fuse is provided on the board for the over voltage protection.

### 2.2 RESETS

#### 2.2.1 Power-on Reset

There are two push button switches, SW1 and SW3 available on board. The SW1 switch is a master reset which resets both the MPU and the KSZ9477 Ethernet switch. SW3 resets only the KSZ9477.

### 2.3 CLOCKS

The evaluation board utilizes a crystal oscillator that provides 25 MHz clock to the KSZ9477 device. The board also features an external clock, DCS1101, which provides 125 MHz 25 ppm clock to the MCU device in the SGMII mode.

2.4 CONFIGURATION

The following sub-sections describe the various board features and configuration settings. A top view of the EVB-KSZ9477 is shown in [Figure 2-1](#).

FIGURE 2-1: EVB-KSZ9477 TOP VIEW WITH CALLOUTS

## 2.4.1 Switch Settings

SW2 is an eight-position switch which controls many of the KSZ9477 configuration strap options. The KSZ9477 samples these signals at the rising edge of RESET\_N to determine some internal settings. Following reset, the configuration of these switches is irrelevant. For initial bring-up, leave most switches in the OFF/OPEN position.

## 2.4.2 Jumper Settings

Table 2-1, Table 2-2 and Table 2-3 describe jumper settings. The preferred configuration is shown in bold text.

TABLE 2-1: TWO-PIN JUMPERS
